Connecting your Kajabi site

If your courses are on Kajabi, each purchase can give your student access to your xWise lessons. This page shows how to set it up.

What it does

Each purchase on your Kajabi site gives that student access to your xWise lessons. After one list of your current members, nobody needs to send a list again.

- When a student buys one of your offers, Kajabi tells us. We match each of your offers to its lessons on xWise, and grant access to the email address the student used to buy.
- Your students create a free xWise account with that same email address and confirm it. Their access is there when they sign in.
- **Subscriptions end by themselves.** Kajabi tells us about every renewal. If a subscriber cancels, the payments stop, and their access ends one billing period and a week after the last payment.
- **You don't change how you sell.** Your offers, prices and memberships stay exactly as they are.
- It needs your site on Kajabi's **Growth or Pro plan**, and a few minutes of setup from you. On the Basic plan, please email us your student list instead.

Part 1: ask Kajabi to tell xWise about each purchase

1. In your Kajabi site, open **Settings**, then **Integrations & Webhooks**.
2. Click **Create webhook**.
3. **Event: Payment Succeeded**. This covers every paid offer, first purchases and renewals.
4. **URL:** the address we send you. It is for your site only, so please don't share it.
5. Click **Save**, then **Send Test**. We'll confirm it arrived.

If you have free offers you want linked to xWise, a free checkout makes no payment, so add the same address to each of those offers too: open the offer, open its **Webhooks** panel, paste the address into **Purchase Webhook URL**, and click **Save**.

The same goes for an offer with a free trial: add the address to that offer too, and tell us how long the trial is. A trial member's access starts with the trial and ends with it, unless their first payment comes through.

Members who joined before you added the webhook: Kajabi only tells us about purchases from now on, so send us an export of your current members once (email address, offer, and for subscribers the last payment date if the export shows it). We load it before we switch your site on.

Nothing changes for your students until we switch your site on at our end, and we'll tell you before we do.

Part 2: link your lessons to xWise

Each lesson's link is copied from the app, and pasted behind your own words.

1. Open the lesson in the xWise app, signed in with your own xWise account.
2. Click ⧉ beside the lesson's name. It copies the lesson's link.
3. In Kajabi, open the lesson in your product, and in its text, type the words your students will click, for example *Practice this lick in RiffWise ↗*. Select them, click the link button, and paste.
4. Click **Save**, then try the link. You should land on the lesson. To check what a student sees, try it with a student's account rather than your own.

We can also send you the links for a whole course as a list.

Good to know

- **Refunds and access you remove by hand:** Kajabi doesn't tell us about these, so please email us and we'll end that student's access at once.
- **Offers you grant by hand** don't notify us either. Tell us, or send us those students' addresses.
- **Same email in both places.** A student's access follows the email address they bought with. If they use a different one for xWise, tell us and we'll move it.
- **Only your lessons.** Purchases on your site open your lessons and nobody else's. An offer we haven't matched opens nothing.
- **We only receive notices.** xWise can't see into your Kajabi site, change anything there or see payment details beyond what each notice says.
- **You can turn it off at any time** by deleting the webhook in Kajabi.
