Connecting your Teachable school

If your courses are on Teachable, your students can open your xWise lessons with their Teachable sign-in, and their access follows your enrollments. This page shows how to set it up.

What it does

Your students sign in to xWise with their Teachable account, and their access follows your enrollments.

- Teachable tells xWise which of your courses a student is enrolled in. We match each of your Teachable courses to its lessons on xWise, and the student is in. No new password for them, and no student lists for you to send us.
- The first time, a student who clicks one of your lesson links is asked to sign in. They click **Sign in with Teachable**, approve once on Teachable, and land on the lesson. After that, your links open straight in.
- When you enroll or remove a student, Teachable tells us. It usually takes a few minutes (under 10 in our tests).
- It needs your school on Teachable's **Growth plan or above**, and about ten minutes of setup from you. Only the school owner can do it.

Part 1: let xWise use Teachable sign-in

1. Sign in to your school and open its admin, where you edit courses.
2. In the menu on the left, click **Settings**, then **OAuth apps**.
3. Click **Add new OAuth app** and fill in the two boxes:
   - **App name:** `xWise`
   - **Redirect URL:** `https://meatpackingmusic.com/accounts/teachable/login/callback/` (paste it exactly, including `https://` and the last `/`, with nothing after the final `/`, not even a space)
4. Click **Generate tokens**.

5. Next to xWise in the list, click **View tokens**. You'll see a **Client ID** and a **Client Secret**. **Copy both before you leave that screen**: Teachable won't show the secret again. If you lose it, delete the xWise app and add it again.
6. Send them to us: the **Client ID** by email, and the **Client Secret** by text message, not email. Treat it like a password.

Part 2: ask Teachable to tell xWise when you add or remove a student

1. Still in **Settings**, open **Webhooks** and add a new webhook.
2. **URL:** the address we send you. It is for your school only, so please don't share it.
3. **Events:** tick **New Enrollment** and **New Unenrollment**, and leave the others unticked.

Nothing changes for your students until we switch your school on at our end, and we'll tell you before we do.

Part 3: link your lessons to xWise

Each lesson's link is copied from the app, and pasted behind your own words.

1. Open the lesson in the xWise app, signed in with your own xWise account.
2. Click ⧉ beside the lesson's name. It copies the lesson's link.
3. In your school's admin, open the lecture, click **Add Content** → **Text & Image** (or click into a text block that's already there), and type the words your students will click, for example *Practice this lick in RiffWise ↗*. Select them, click the link button, and paste.
4. Click **Save**, then click the link to try it. You should land on the lesson. To check what a student sees, try it with a student's account rather than your own.

We can also send you the links for a whole course as a list.

Good to know

- **Your students see one screen, once.** Teachable asks whether they're happy to share their name, email and course list with xWise. They click **Authorize**.
- **xWise only reads.** It sees which of your courses a student is enrolled in. It can't change anything in your school or see payments.
- **Only your lessons.** Signing in through your school opens your lessons and nobody else's. A Teachable course we haven't matched opens nothing.
- **The Sign in with Teachable button for your school appears only for your students:** on the sign-in page reached from one of your lesson links.
- **You can turn it off at any time** by deleting the xWise app in your school's **Settings**.
- **If you don't see OAuth apps or Webhooks** under Settings, your plan may not include them. Send us a screenshot of your Settings menu and we'll check.
